

Lionbridge Connector for Adobe Experience Manager

Version 4.0.2

Release Notes

October 6, 2020

Overview

Welcome to the Lionbridge Connector for Adobe Experience Manager (Connector). The Connector enables you to automate sending and retrieving content from your Adobe Experience Manager CMS, which dramatically reduces the effort required to create, maintain, and publish Web content in multiple languages.

How to Contact Lionbridge Connector Support

Email @: connectors@lionbridge.com

You can submit a support ticket either:

- by email
- from the Lionbridge Connector Zendesk page, using your web browser:
<https://connectors.zendesk.com/>

For more information, visit: http://connectors.lionbridge.com/docs/Common/Support_Liox.htm

System Requirements

The Lionbridge Connector for Adobe Experience Manager must be installed on the Adobe Experience Manager Author server. The Lionbridge Connector for Adobe Experience Manager supports Adobe Experience Manager versions 6.2 and higher.

The Lionbridge Connector for Adobe Experience Manager has no additional hardware or software requirements beyond those of Adobe Experience Manager. For detailed requirements, refer to the appropriate version of the *Adobe Experience Manager Technical Requirements*.

What's New?

- Three new sections have been added to the **Advanced Settings** page:
 - The new **Log JCR Properties During Translation** section enables you to configure the Connector to write JCR property values to the log file during translation.
 - The new **Configuration for Catching Rollout Pages to Queue** section enables you to configure the Connector to catch rollout pages and send them directly to the Translation Queue.
 - The new **Page Property Update Configuration** section enables you to configure the Connector to copy and translate metadata fields. These fields are displayed in the **Page Property Updating** tab of the Globalization Tool.
- In the Globalization Tool, you can now import a list of target languages from an Excel file for a translation job.
- The **Tasks** tab of the **Backend Tasks** page now has **Select All** and **Clear All** buttons.
- When using the Connector with AEM 6.5 on AMS (Adobe Managed Services), the Connector configuration settings are under `/conf` instead of under `/etc`.
- The translation metadata file now includes the job creator ID in the `Created By` field.

Issues Fixed in This Release

Issue ID	Description
338409	Previously, the URL was not correctly converted for DAM (Digital Asset Metadata) files when there was additional special asset handler defined for these DAM assets. This issue has been resolved.
340222	Previously, a multi-field Content Fragment was exported as a single line. This issue has been resolved.

Issue ID	Description
346336	Previously, when sending multiple DAM (Digital Asset Metadata) files and pages for translation in a single job, the asset count in the job metadata was incorrect. This prevented the translation system from receiving all the translation files. This issue has been resolved.
349449	Previously, when sending content for translation that included a reference URL to a target in the same translation job that had not yet been translated, the URL was not converted. This issue has been resolved. In this scenario, the URL is now converted correctly.
358194	A SQL error caused duplicate entries in the Translation Queue. This issue has been resolved.
359851	The Connector displayed an error when there was a single quotation mark inside a property name. This issue has been resolved.
394600	In version 4.0.1 of the Connector, the Sidekick menu items were duplicated. This issue has been resolved.
395753	When using the encryption feature, the Key Password field in the Edit Provider dialog box displayed an incorrect encryption key password. This issue has been resolved.
397862	Previously, after updating the page property configuration in the Page Property Updating tab of the Globalization Tool, an error message was displayed when trying to submit the corresponding task. This issue has been resolved.
401460	Previously, when resending a translation job for which the Select if using Blueprint/Live-copy check box had been selected, this check box was cleared by default for the job to resend. This issue has been resolved: When resending a job for which the Select if using Blueprint/Live-copy check box had been selected, it is now selected by default for the job to resend.

Known Issues

Issue ID	Description
283021	By default, the Connector caches all the files for translation and all received translation files. To instruct the Connector <i>not</i> to cache these files, edit <code>/etc/ctcpipelineconfig/ctcTranslationPipes.xml</code> in CRX and follow the instructions in the comments in that file about how to comment out or enable particular steps in the Pipeline to meet your needs. Starting in version 2.5.0 of Connector, the files are stored in the database, so you should update the <code>DeleteLocalTranslationFile</code> pipeline step to remove cached files from the database instead of looking in the file system. For updated instructions, please contact Lionbridge Support.
283022	When using Adobe Experience Manager 6.2, some pages and dialog boxes that are slow to load are blank instead of populated with data. This is caused by an issue in Adobe Experience Manager 6.2. You can contact Adobe Support to receive a hotfix for this issue, which will be fixed in an upcoming Adobe maintenance release.
283025	In versionx 3.3.x of the Connector, after removing a user from Adobe Experience Manager who still had jobs in the Translation Queue, users cannot open the queue, and an error message is displayed.
283026	When using the Microsoft SQL Server database, monitoring a job from within Adobe Experience Manager that was sent using Adobe's Translation Integration feature initially displays the job status as <code>Committed for translation</code> , but that automatically changes to <code>Cancel</code> .
283029	In the Translation Queue, clicking a link in the Page column displaying the path and name of a Content Fragment does not open that fragment in a new browser tab. Instead, the browser tab displays a 404 error.
283030	The <code>Sample_CT_Workflow_Translation</code> workflow add-on is not supported in the current release. Therefore, you cannot use this workflow to send content for translation, either from the Inbox or from Sidekick.
	When the add-on for Lionbridge Freeway is installed, Freeway-specific fields are displayed in the second page of the Sidekick wizard even when Lionbridge Freeway is not selected as the translation provider (LSP).
