LIONBRIDGE

Lionbridge Connector for Adobe Experience Manager

Version 4.0.3

Release Notes

Friday, October 30, 2020

Overview

Welcome to the Lionbridge Connector for Adobe Experience Manager (Connector). The Connector enables you to automate sending and retrieving content from your Adobe Experience Manager CMS, which dramatically reduces the effort required to create, maintain, and publish Web content in multiple languages.

How to Contact Lionbridge Connector Support

Email @: connectors@lionbridge.com

You can submit a support ticket either:

- by email

- from the Lionbridge Connector Zendesk page, using your web browser:
  https://connectors.zendesk.com/

For more information, visit: http://connectors.lionbridge.com/docs/Common/Support_Liox.htm

System Requirements

The Lionbridge Connector for Adobe Experience Manager must be installed on the Adobe Experience Manager Author server. The Lionbridge Connector for Adobe Experience Manager supports Adobe Experience Manager versions 6.2 and higher.

The Lionbridge Connector for Adobe Experience Manager has no additional hardware or software requirements beyond those of Adobe Experience Manager. For detailed requirements, refer to the appropriate version of the *Adobe Experience Manager Technical Requirements*.

What's New?

- When a page is sent for translation and if the `Use_CData` option is set as true, all the text formats such as rich text, plain text, and HTML formats in the page are wrapped under `CData`. Previously, only HTML format was supported for `CDATA`.

- The new **Language Conversion option** is added to the **Translation Settings** page. This option enables the Connector to convert the asset URL references and the content links even if the target folder does not exist.

- Upgraded the Microsoft SQL server JDBC driver to the latest version. With this upgrade, the Connector supports the Microsoft SQL server 2012 and higher versions. Starting from this release, the Connector no longer supports Microsoft SQL Server 2008 and 2008 R2 versions.

- The new column **Published** is added to the **Job details** tab on the **Translation Status** page. This column displays the details such as published date, published time, and the user who published the page. For example, it shows as `2020-01-05 11:50AM (admin).` For an unpublished page, this column is blank.

Issues Fixed in This Release

Issue ID	Description
283025	Previously, the **Translation Queue** page was inaccessible after a user was removed from AEM that had jobs still remaining in the queue.
342971	When a user selected multiple logs and clicked on **download** button, only the *ctt.log* file was downloaded in the zip file. This issue occurred in the Connector version 4.0 running on AEM 6.4, and 6.5 versions. With this fix, the user can download the multiple selected log files.

Issue ID	Description
444718	Previously, the **Page Property Configuration** was not exported when user clicked **export** button from the **Advanced Settings** page. This issue has been fixed. The users can now successfully export the **Page Property Configuration**.
454090	Fixed an invalid JSON formatting issue where "{" was moved to next line when `/n` was removed.
457201	Previously, the **Timewarp** menu option was not visible under **Edit** drop-down menu on the AEM assets page after the Connector package was installed on the AEM 6.4 and 6.5 versions. This issue has been fixed.
448677	When a Live copy page was submitted for translation after breaking the inheritance from its master page, the Live Sync configuration properties were changed. This issue has been fixed.

Known Issues

Issue ID	Description
283021	By default, the Connector caches all the files for translation and all received translation files. To instruct the Connector *not* to cache these files, edit `/etc/ctcpipelineconfig/ctcTranslationPipes.xml` in CRX and follow the instructions in the comments in that file about how to comment out or enable particular steps in the Pipeline to meet your needs. Starting in version 2.5.0 of Connector, the files are stored in the database, so you should update the `DeleteLocalTranslationFile` pipeline step to remove cached files from the database instead of looking in the file system. For updated instructions, please contact Lionbridge Support.
283022	When using Adobe Experience Manager 6.2, some pages and dialog boxes that are slow to load are blank instead of populated with data. This is caused by an issue in Adobe Experience Manager 6.2. You can contact Adobe Support to receive a hotfix for this issue, which will be fixed in an upcoming Adobe maintenance release.
283025	In versionx 3.3.x of the Connector, after removing a user from Adobe Experience Manager who still had jobs in the Translation Queue, users cannot open the queue, and an error message is displayed.

Issue ID	Description
283026	When using the Microsoft SQL Server database, monitoring a job from within Adobe Experience Manager that was sent using Adobe's Translation Integration feature initially displays the job status as `Committed for translation`, but that automatically changes to `Cancel`.
283029	In the Translation Queue, clicking a link in the **Page** column displaying the path and name of a Content Fragment does not open that fragment in a new browser tab. Instead, the browser tab displays a 404 error.
283030	The `Sample_CT_Workflow_Translation` workflow add-on is not supported in the current release. Therefore, you cannot use this workflow to send content for translation, either from the Inbox or from Sidekick.
	When the add-on for Lionbridge Freeway is installed, Freeway-specific fields are displayed in the second page of the Sidekick wizard even when Lionbridge Freeway is not selected as the translation provider (LSP).
